1. Application Layer
    a. Detection Methods for Application Protocols
        i. Protocol Decode
        ii. Pattern Matching
        iii. Anomaly Behavior
        iv. Detection Challenges
    b. DNS
        i. Introduction
        ii. DNS Structure
        iii. Server & Client Types
        iv. Lookup Route
        v. Request Types
        vi. Header
        vii. Large DNS Response
        viii. DNS Malicious Cases
        ix. DNS Tunneling
        x. Fast-Flux
        xi. DNS Cache Poisoning
        xii. DNSSEC
        xiii. Detection for DNS Traffic
    c. SMB
        i. Introduction
        ii. Conversation Flow
        iii. SMB Detection Challenges
        iv. MSRPC-over SMB
        v. Microsoft Protocol Detection Challenges
    d. HTTP(S)
        i. Introduction
        ii. Request Header Format
        iii. Response Header Format
        iv. Decoding URL
        v. GET
        vi. POST
        vii. Other Methods
        viii. Request Headers
        ix. User-Agent Construction
        x. Response Headers

xi. Common Response Codes
xii. HTTP/2
xiii. Header Format
xiv. Request & Response in Wire
xv. TLS
xvi. Heartbleed Attack Beak down
xvii. Normal HTTPS
xviii. HTTPS/3

e. SMTP
i. Introduction
ii. Header
iii. Protocol Details
iv. Email Headers
v. Spoofing
vi. Verify The Source
vii. SPF
viii. DKIM
ix. DMARC
x. Detection Challenges
